

# BDO FILE EXCHANGE TECHNICAL DOCUMENTATION

BDO File Exchange can transfer files via an HTML5 plug-in Plupload, which has two back ups flash and silverlight.

Plupload is based on multi-runtime pollyfills for XMLHttpRequest L2, File and Image APIs. So when there's no HTML5 available in the browser, plupload will emulate it.

Files are uploaded in 1MB chunks, with a maximum individual file size of 8GB. When on a poor network connection, when a chunk fails to upload it will retry 10 times before the upload fails.
